

Data Centre Download Tool

Installation Guide

Requirements

- Java SE 7 or above (<http://www.java.com>)
- Disk space: 8 MB for Windows and Linux, 145 MB for Mac OS X.

Installation and use on Windows

Download and uncompress the zip:

```
"Data_Centre_Download_Tool_1.7_win_installer.zip"
```

Execute the installer for windows:

```
"Data_Centre_Download_Tool_1.7_win_installer.exe"
```

Following the installer wizard will extract the tool files into a chosen local directory, create start menu shortcuts (optional) and place a shortcut in the desktop (optional).

To use the tool,

- Click the desktop shortcut, or
- Click the application start menu shortcut, or
- Execute "\$INSTALLATION_DIR/dt.exe".

To uninstall the tool,

- Click the uninstaller start menu shortcut, or
- Execute the "\$INSTALLATION_DIR/uninstaller.exe".

Installation and use on Mac OS X

Download and uncompress the zip:

```
"Data_Centre_Download_Tool_1.7_macosx.zip"
```

Drag and drop the "Data Centre Download Tool" application icon into the Applications folder (or into another chosen location).

To use the tool, click on the application icon.

To uninstall the tool, drag and drop the application icon into the dust bin.

Installation and use on Linux

Download and uncompress the tar.gz:

```
"Data_Centre_Download_Tool_1.7_linux.tar.gz"
```

Copy all of its contents into a chosen local directory (please make sure read/write permissions are properly set up).

To use the tool, execute this in the command line (make sure java bin directory is included in the path):

```
#> cd $INSTALLATION_DIR
```

```
#> java -jar dt.jar
```

To uninstall the tool, simply delete the installed directories and files.
